10 Test Tools

10.1 N Test Tool

The **N test tool** is a system designed to test tubing for leaks. It is offered in a number of bore sizes, and can locate and seal on any no-go nipple profile. It can be run and pulled using the same standard overshot type

pulling tool, and allows for fluid equalization during retrieval, making the process simpler and safer.

Available tool sizes as shown. Please contact our sales office for further enquiries.
